# Funder Requirements

## Section B: Overview of the research.....

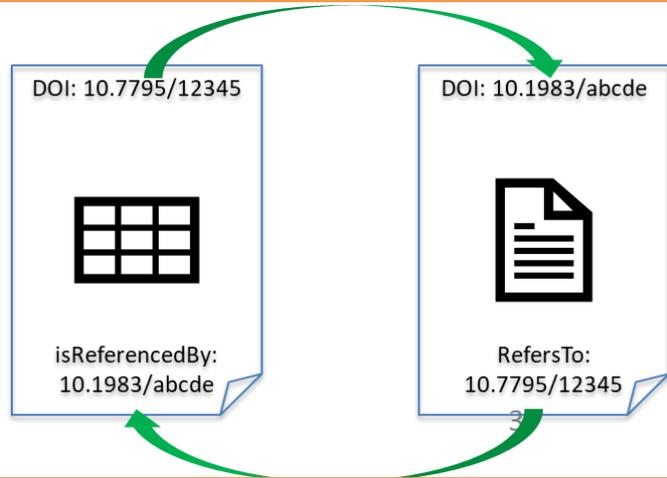

- B1 Summary of the project.....
- B2 Excellence.....
  - B2.a Overview of the objectives.....
  - B2.b List of deliverables.....
  - B2.c Need for the project.....
  - B2.d Progress beyond the state of the art.....
  - B2.e Gender dimension.....
  - B2.f Open science.....
  - B2.g Research data management and management of other research outputs.....
- B3 Potential outcomes and impact from the project.....

- Project proposal (JRP)
  - Open Science
  - Management of data + other outputs

- Data management plan
  - FAIR principles; Security; Licenses; Responsibilities; Costs...

- Article & data publication
  - Funder acknowledgement
  - Metadata, identifiers...

# EURAMET EPM requirements

---

EPM projects are “co-financed from the EU Horizon Europe Research and Innovation Programme and by the Participating States”.

**Open science** practices as per Regulation (EU) 2021/695 (Horizon Europe): rules for participation and dissemination

JRP proposals (max. 1 pages) in section B2.f (Open science):

- Early and open sharing of research outputs
- Providing open access to research outputs (publications covered in Annex 5 GA)
- Participation in open peer-review

**“As open as possible, as closed as necessary”**

# EURAMET EPM requirements

---

**“As open as possible, as closed as necessary”**

All data needed to validate results in scientific publications **openly available** (no raw data)

By default but possible to restrict data sharing on a **case-by-case basis**

Examples of voluntary restrictions given by EURAMET:

- Third parties' data (if they don't agree to make them openly available)
- Data that disclose identity of a manufacturer
- Data compromising the protection of a participant(s) intellectual property

# Personal and sensitive data

---

Data protection is a fundamental right under EU law: General Data Protection Directive ([GDPR](#)), Law Enforcement Directive ([LED](#)) and Data Protection Regulation for EU institutions, bodies, offices and agencies ([EUDPR](#)).

**Personal data:** data that can be used to identify a person

**Sensitive data:** a special type of personal data that requires extra precautions (e.g., genetic data, data relating to health, ethnicity, religion, criminal proceedings...)

Personal/sensitive data can be stored, edited and shared considering certain aspects

# Personal and sensitive data

---

At the beginning of the project:

- Organize secure data storage (get in touch with IT) – only authorized access
- Prepare consent forms (following legal and ethical guidelines and requirements)

Before publishing:

- Make sure you have participants' consent
- Data anonymization (data obfuscation, data pseudonymization...)
- Select a licence to regulate how data can be reused
- Pay attention to backup strategies (cloud options data protection-friendly?)

# Data anonymization

Data is hidden or transformed (e.g. aggregated, regrouped or deleted) in a way is not possible to reidentify individuals and/or to have unauthorized access.

## Generalization

	Name	Age	Salary	Location
0	Alice	28	55000	123 Main St, New York
1	Bob	45	85000	456 Elm St, Los Angeles
2	Charlie	33	45000	789 Oak St, Chicago
3	David	19	30000	234 Maple St, Houston
4	Eve	61	90000	567 Pine St, Miami

	Name	Age	Salary	Location
0	Alice	26-35	55000	New York
1	Bob	36-50	85000	Los Angeles
2	Charlie	26-35	45000	Chicago
3	David	0-25	30000	Houston
4	Eve	51+	90000	Miami

## Pseudonymization

	Name	Email
0	Alice	alice@example.com
1	Bob	bob@example.com
2	Charlie	charlie@example.com
3	David	david@example.com
4	Eve	eve@example.com

# Data versioning

---

Data integrity and reliability, reproducibility, troubleshooting, traceability, provenance

Two types

- Versioning of data being generated (early in the project)
- Versioning of published dataset (towards the end of the project)

## **Backup vs. Versioning**

Data backup: creating copies of data for recovery purposes

Data versioning: tracking and managing dataset changes over time (metadata!!)

Challenging (e.g. large datasets, pipeline integration)

# Data versioning – Type 1

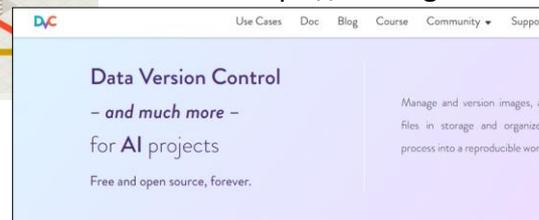

## Best practices

- Right **versioning strategy** depending on specific needs and constraints (version numbering schemes, when to create new versions, version storage... )
- Effective **metadata** management (metadata describing changes, context, ...)
- Clear **policies/guidelines** within consortium (consider partners' institution policies!!)
- **Automatic** version control (existing specialized tools; e.g. Git-based solutions)

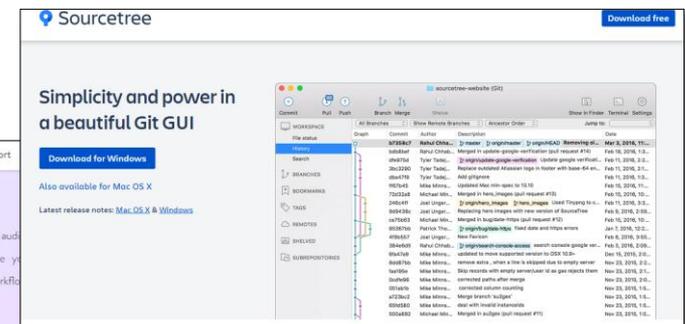

<https://git-scm.com>

<https://dvc.org>

<https://www.sourcetreeapp.com>

# Data versioning – Type 2

---

Datasets published in open repositories

- Repository metadata can be modified after publication
- Uploaded files cannot be modified!

To “modify” published datasets, new versions upload to repository

New versions associated with the original data (a kind of common DOI comprising all versions + an individual version DOI)

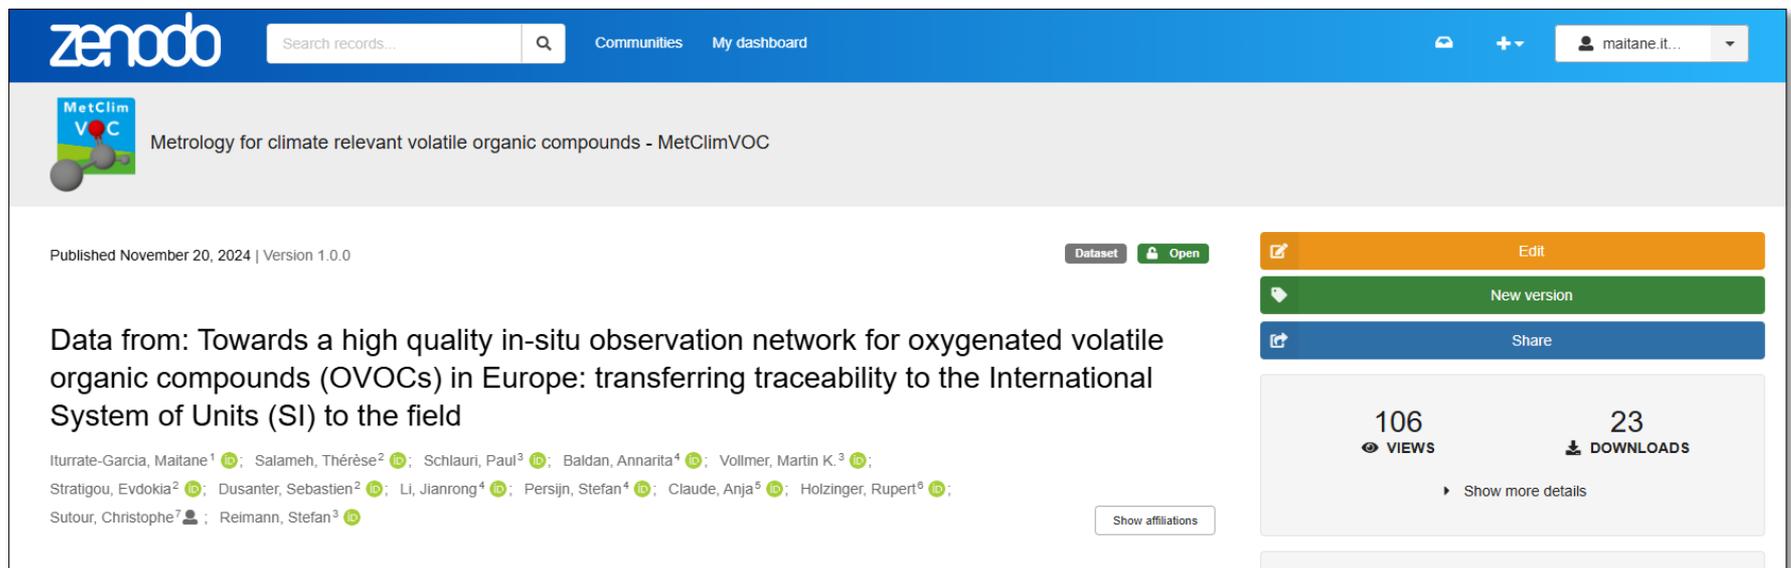

Versions	
Version 2025-06-12 10.5281/zenodo.15646055	Jun 12, 2025
Version 2025-06-05 10.5281/zenodo.15598678	Jun 5, 2025

# Data versioning – Type 2

<https://zenodo.org/records/14178374>

The screenshot shows the Zenodo interface for a dataset. At the top, there is a blue navigation bar with the Zenodo logo, a search bar, and links for 'Communities' and 'My dashboard'. The user profile 'maitane.it...' is visible in the top right. Below the navigation bar, the dataset title 'MetClim VOC' is displayed with a logo and the subtitle 'Metrology for climate relevant volatile organic compounds - MetClimVOC'. The publication date is 'November 20, 2024' and the version is '1.0.0'. On the right side, there are three action buttons: 'Edit' (orange), 'New version' (green), and 'Share' (blue). Below these buttons, the statistics show '106 VIEWS' and '23 DOWNLOADS', with a 'Show more details' link. The main content area contains the title 'Data from: Towards a high quality in-situ observation network for oxygenated volatile organic compounds (OVOCs) in Europe: transferring traceability to the International System of Units (SI) to the field' and a list of authors with ORCID icons. A 'Show affiliations' button is located at the bottom right of the author list.

# Data publication

---

Several aspects to consider at the beginning of the project (part of RDM)

- Early discussions within the consortium (agreement): open repository, licence type, datasets to be published/restrictions, responsible person/small group for data curation, data curation policies...
- Consortium training (licensing, metadata, data versioning...)
- Project flowchart and checklist for data publication covering the main processes: dataset preparation for publication, metadata creation, long-term access, licensing, data citation...

# Data publication – a real-case

# Data publication – a real-case

## Early discussions/decisions

A community to share datasets, papers and guidelines contributing to improve the traceability, accuracy and comparability of measurements of atmospheric volatile organic compounds (VOCs) relevant for climate. The main goal of the community, created by the European Project EURAMET-EMPIR 19ENV06 MetClimVOC (<https://www.metclimvoc.eu>), is to provide open access FAIR data with focus on metrological aspects of atmospheric VOCs measurements.

The collection includes mainly data generated in the framework of the project MetClimVOC from measurements, calibrations, comparisons and validations. In addition, datasets originated out of the project but contributing clearly to improve the metrology of VOC measurements are accepted (see curation policy).

The collection is suitable for use by research groups working on the following topics: climate change, atmospheric chemistry, reactive gases, VOCs and spectrometry, as well as for atmospheric monitoring networks and bodies, and manufacturers of instruments, gas handling devices, gas cylinders and VOCs dynamic methods (diffusion, permeation...).

1. If an uploaded document and/or dataset has an existing DOI, it will be kept. A Zenodo DOI will be attributed to documents and/or datasets without existing DOI.
2. Items with Open Access remain Open Access.
3. Items must not contain any copyright restrictions.
4. All files should be able to be opened without any passcode restrictions.
5. No Personal Health Information or sensitive data can be included.
6. All information needs to be in English.
7. Datasets will be licensed under a Creative Commons Attribution 4.0 (CC BY 4.0) or a Creative Commons Attribution Share Alike 4.0 (CC BY-SA 4.0).
8. Datasets should include descriptive names for columns and rows.
9. A README file must be provided together with the dataset including at least the following information:
  - Title: it should be descriptive of the dataset
  - Author(s): name, institutional affiliation, email address and/or ORCID
  - Abstract: short description of the dataset
  - Methods: any methodological information (i.e. analyser, compounds...), including calibration and traceability information, which may help others to understand how the dataset was generated.
  - Funding information (e.g. in the case of datasets generated in the framework of the project MetClimVOC, this information will include the terms "EMPIR", "European Union (EU)" and "Horizon 2020" as required in article 29.2 of the EMPIR Grant Agreement)
  - Related works: e.g. publication DOI, other datasets, code...

The community curator will use the information included in the readme file to generate the metadata of the dataset. The metadata will be human and machine-readable (e.g. JSON).

To upload datasets and publications, please contact [maitane.iturrate@metas.ch](mailto:maitane.iturrate@metas.ch) or [celine.pascale@metas.ch](mailto:celine.pascale@metas.ch)

# Data publication – a real-case

## Manuscript drafting

### Annex I: Checklist

#### Manuscript drafting

- All data are saved as CSV files.
- File names follow DMP specifications:  
`yyyymmdd_19ENV06_MetClimVOC_experiment01_institution.csv`.
- Descriptive headers are included in the files (column names including quantities and units).
- The requested metadata is available in the manuscript, dataset or (if needed) in the metadata form.
- The data analysis is described in detail indicating performed data transformations, outliers and software used for the analysis, including software version (this applies to programming packages also).
- All the questions included in Annex II – Manuscript drafting flowchart – can be positively answered.

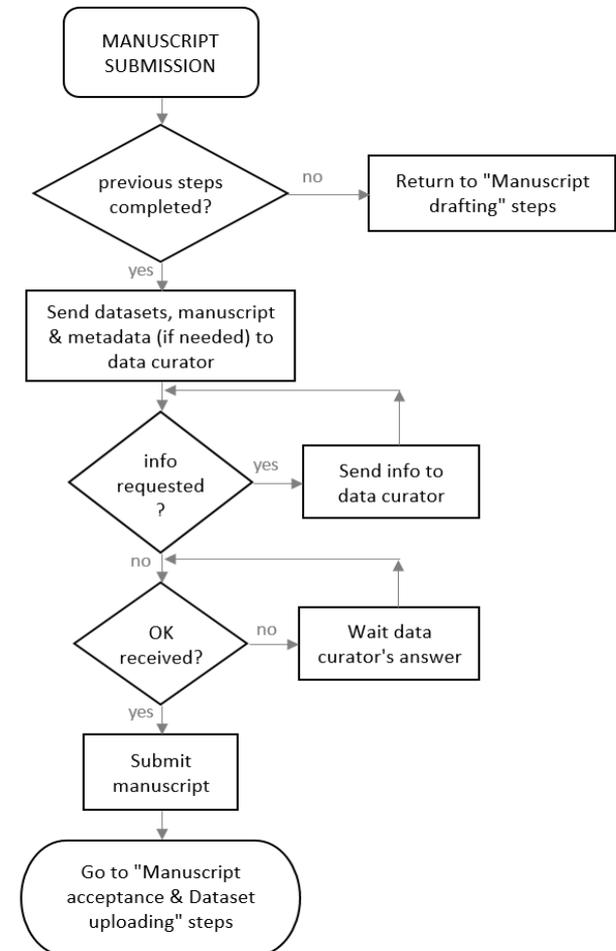

# Data publication – a real-case

## Manuscript submission

### Annex I: Checklist

#### Manuscript submission

- Dataset, manuscript and metadata (if needed) were sent to the data curator.
- Data curator's OK was received.
- Manuscript submission.
- Manuscript review finished; manuscript accepted.

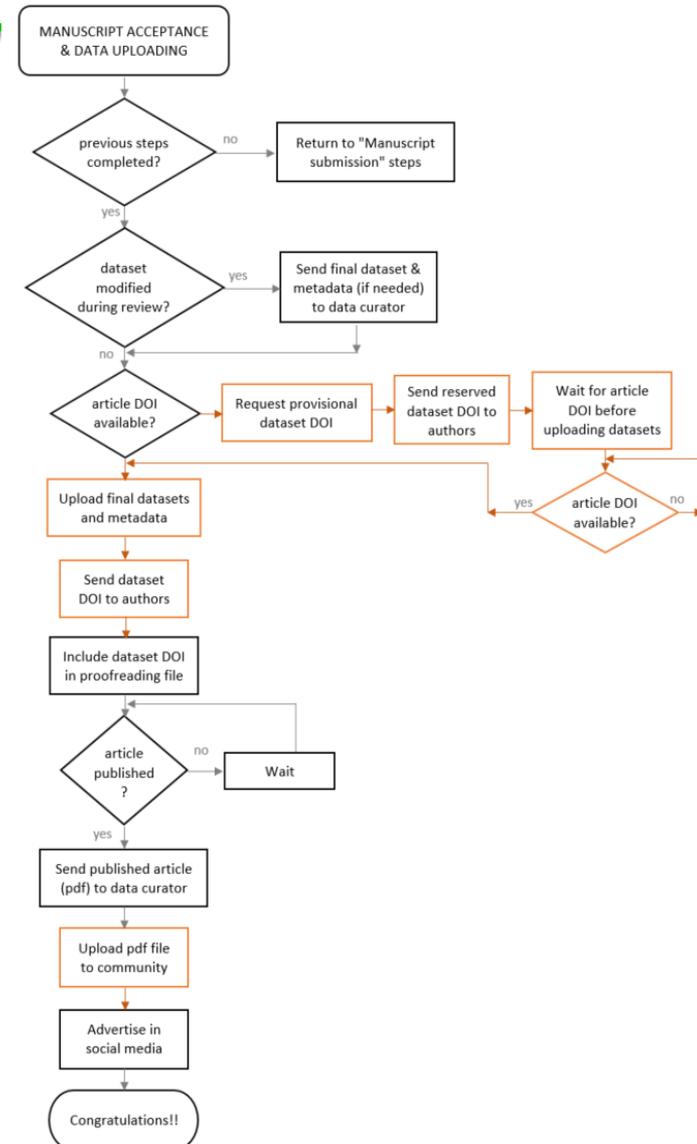

# Data publication – a real-case

## Dataset uploading

### Annex I: Checklist

#### Dataset uploading

- ❑ Final dataset (if modified during review process) sent to data curator.
- ❑ (Only data curator) data files format and structure checked: correct and metadata completed.
- ❑ (Only data curator) DOI for dataset ("reservation) requested if accepted article DOI is not available; information sent to authors.
- ❑ (Only data curator) datasets uploaded – only after the article DOI is available.
- ❑ Final pdf file sent to the data curator (only after the proofreading process is finished and the article published).
- ❑ (Only data curator) Article pdf file uploaded to the community.
- ❑ (Authors + data curator) published article and uploaded datasets advertised in the personal and project social media.
- ❑ (Only data curator) dataset and article information sent to EURAMET repository.
