

RDM in EPM projects: Module 3 - Breakout session: exploration of the SI digital framework

Peter Blattner (Chief Metrology Officer)

METAS, Switzerland

Member of various FORUM-MD WG/TGs

Objectives of my talk

- Examples of how information (data/metadata) can be made accessible.
- Promote the SI Digital Framework.
- Provide practical hints on how to access and deal with structured data.

27th CGPM in November 2022

Resolution 2

“On the global digital transformation and International System of Units”

Encourages

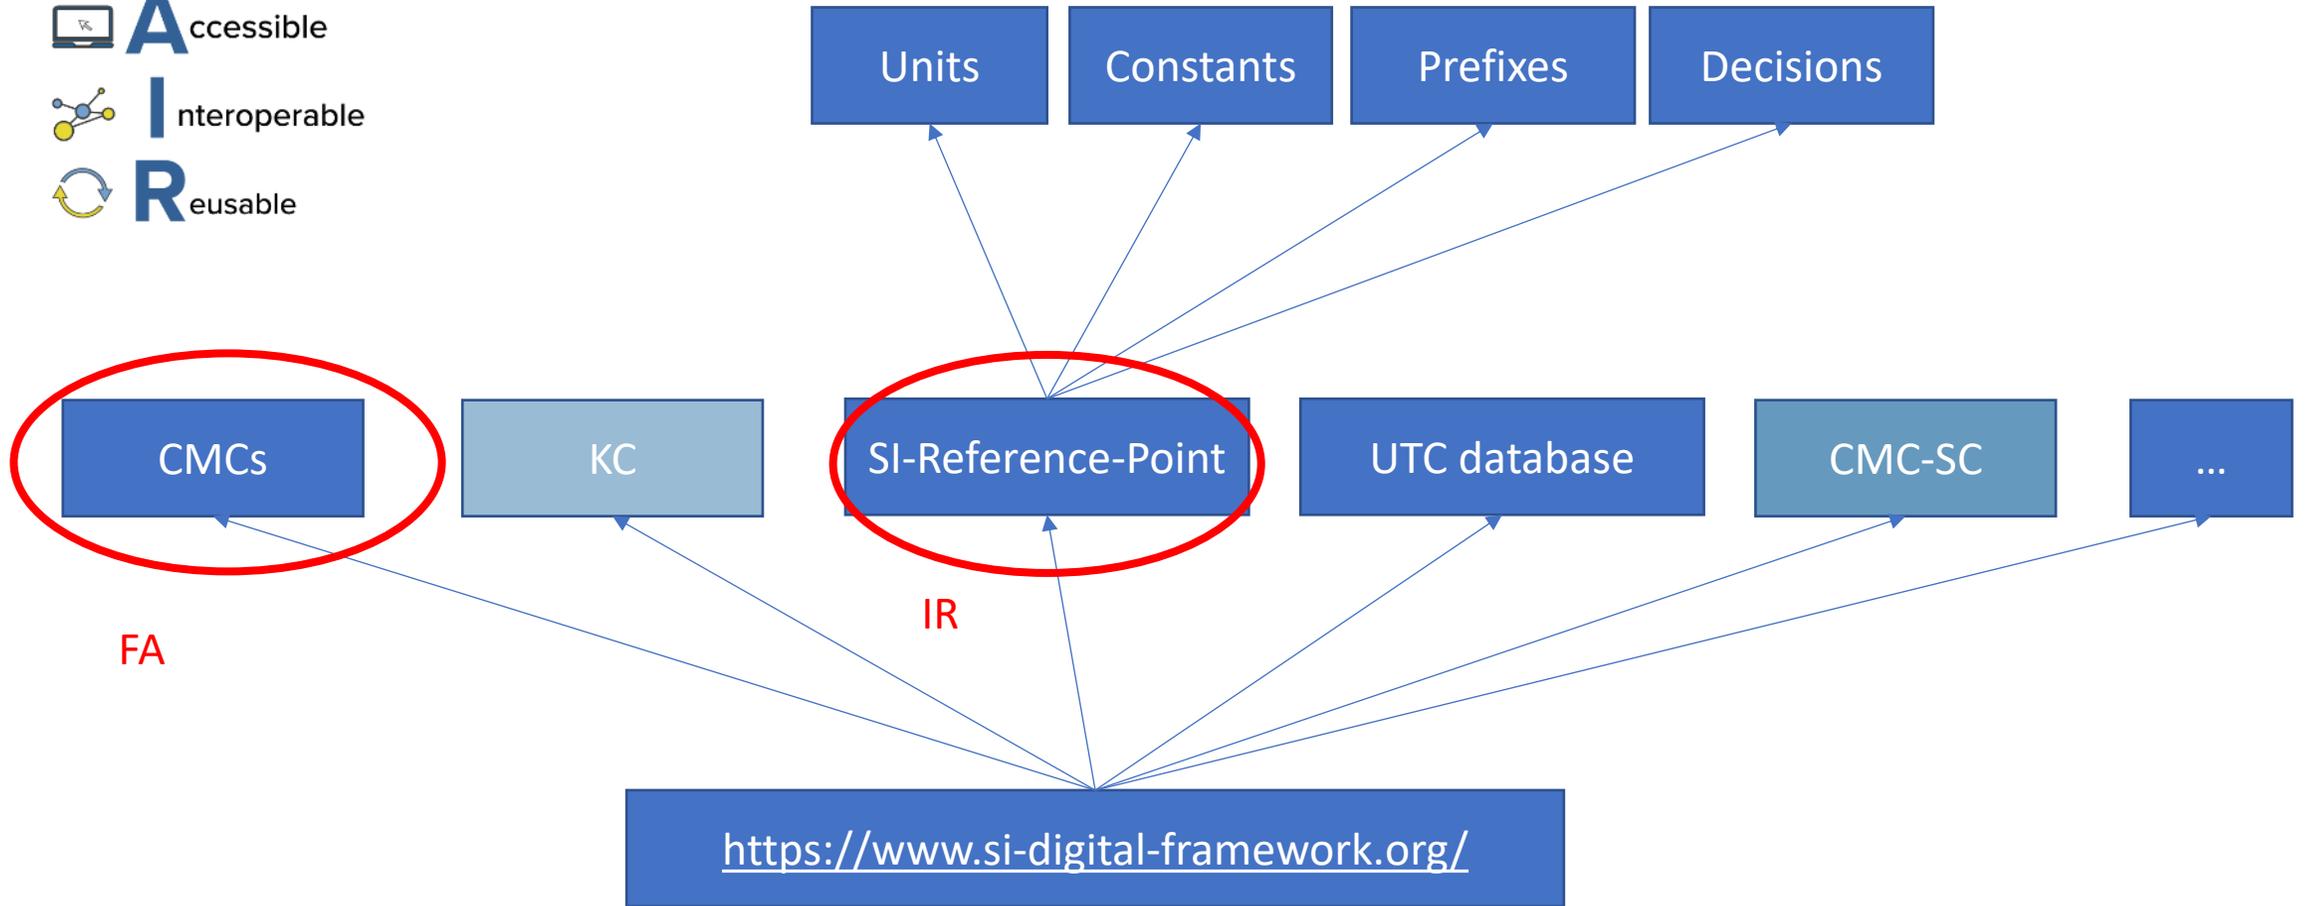

the CIPM to undertake the development and promotion of an SI Digital Framework, that will include the following features:

- a globally accepted digital representation of the SI, compatible with, and useable within, digital data exchange standards and protocols, whilst maintaining compatibility with existing non-digital solutions,
- facilitating use of digital certificates in the existing robust infrastructure for the world-wide recognition and acceptance of calibration and measurement capabilities,
- the adoption of the FAIR principles (Findable, Accessible, Interoperable, and Reusable) for digital metrological data and metadata, ensuring that other communities recognize the critical importance of metrological traceability for measurement data, the latter being an established requisite for building trust.

BIPM/CIPM initiative: SI Digital Framework (SIDF)

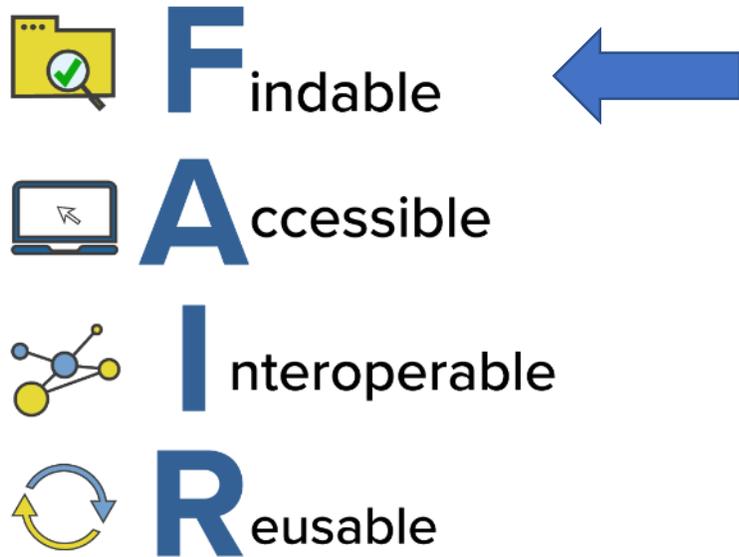

-  **F**indable
-  **A**ccessible
-  **I**nteroperable
-  **R**eusable

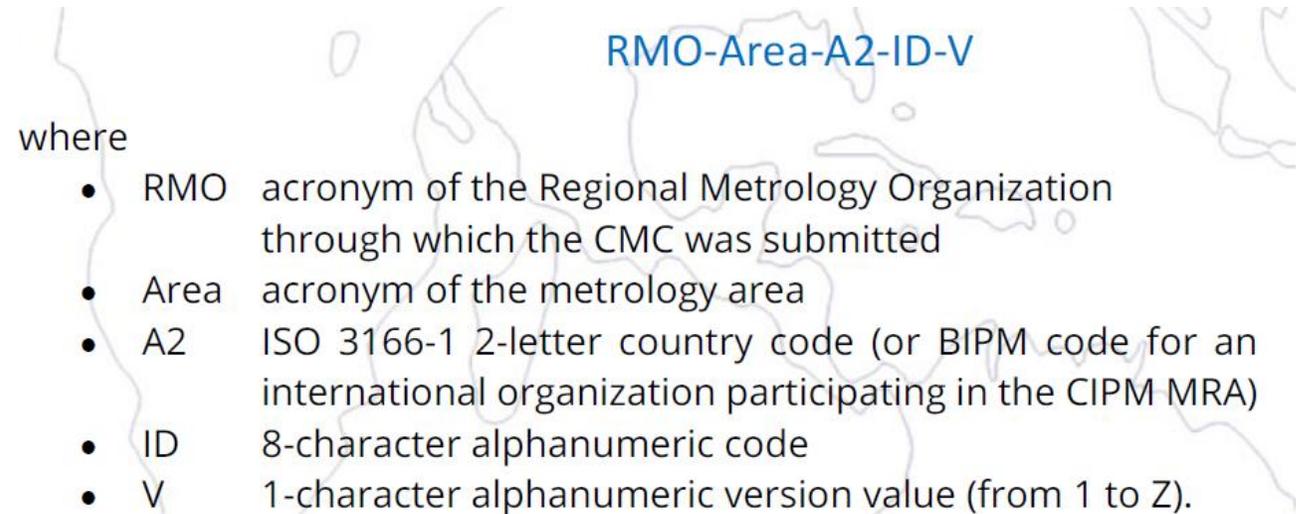

Digital references for all CMCs

CMC: calibration and measurements capabilities

Persistent identifier (pid): kcdbCode

Example:

EURAMET-EM-CH-00000GF9-5

How to find the kcdbCode?

Method 1 : CMC search

Results for: Mass and related quantities > Mass, mass standards > Mass > Mass standard > Mass standard > Switzerland

10 results

SELECT ALL

 **EXPORT XLS**

New since Feb 2025

In the CMC uncertainty statements, $Q[a,b] = [a^2 + b^2]^{1/2}$

Unless otherwise stated the expanded uncertainties given below correspond to $k = 2$ (at a 95 % level of confidence)

<input type="checkbox"/>	GROUP ID	SERVICE PROVIDER	INSTITUTE SERVICE CODE	EXPANDED UNCERTAINTY CMC	PARAMETERS	APPROVAL DATE	KCDB CMC ID
<input type="checkbox"/>		Switzerland METAS		[0.7 to 1.4] µg		2008-07-02	EURAMET-M-CH-00000CHH-1

Potential applications: Calibration Certificate

Certificate of Calibration No 116-05146

Object Standard lamp OSRAM WI 41/G
Serial Number: xyz

Order Calibration of the luminous intensity

Applicant BIPM
Pavillon de Breteuil
F-92312 Sèvres Cedex
FRANCE

Traceability The reported measurement values are traceable to national standards and thus to internationally supported realisations of the SI units.

Date of Calibration 16.10.2022

Marking Calibration label METAS 10.2022

CH-3003 Bern-Wabern, 17 October 2022

For the Measurements Reto Schafer

Approved by Dr. Peter Blattner, Head of Laboratory
Optics Laboratory

Mutual recognition
This certificate is consistent with Calibration and Measurement Capabilities (CMCs) that are included in Appendix C of the Mutual Recognition Arrangement (MRA) drawn up by the International Committee for Weights and Measures. Under the MRA, all participating institutes recognize the validity of each other's calibration certificates and measurement reports for the quantities, ranges and measurement uncertainties specified in Appendix C (for details see www.bipm.org).

This document is only valid and reviewable in its electronic form.
Please observe the information given on www.metas.ch/eccer.

Unit expressions

A parsing tool to provide the PID and semantic model for compound units.

Non-ASCII characters used for representation of prefix micro and units degree Celsius, ohm, degree, arcminute, arcsecond.

μ	$^{\circ}\text{C}$	Ω	$^{\circ}$	'	"
-------	--------------------	----------	------------	---	---

kg.mm2.ns-2

Enter your unit expression using the syntax below:

Syntax: Enter your unit expression (without spaces) using the recommended symbols for units and prefixes. Use the buttons above to enter any special characters.

Indicate multiplication of units using a dot on the line (e.g. N.m for newton metre).

Indicate an exponent with a digit (e.g. mm2 for millimetre squared, mm²); use a minus sign for negative exponents (e.g. ns-2 for per nanosecond squared, ns⁻²).

PIDs for compound units
